Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

Welcome to Dinoland.

Let's create, nurture your own dinosaurs to get RICH in this ultimate virtual world.

Join our squad NOW!

Project Engagement

During the 9th of December 2021, **Dinoland Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

• TBA

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Dependency / Import Path	Count
@openzeppelin/contracts-upgradeable/proxy/utils/Initializable.sol	1
@openzeppelin/contracts-upgradeable/token/ERC721/ERC721Upgradeable.sol	1
@openzeppelin/contracts/access/Ownable.sol	3
@openzeppelin/contracts/security/Pausable.sol	1
@openzeppelin/contracts/security/ReentrancyGuard.sol	2
@openzeppelin/contracts/token/ERC20/ERC20.sol	1

@openzeppelin/contracts/utils/math/SafeMath.sol	1

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/DinoLandNFTUpgradeable.sol	1a716cc65c0160e0dcccdb383d5d0e3d6a9a0df3
contracts/DinosAccessControl.sol	91a7adde291f5a5cef6022d0eaf9b21d2b4109f1

Scope of Work

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

Inheritance Graph v1.0

Verify Claims

Correct implementation of Token standard

Tested	Verified
✓	✓

Function	Description	Exist	Tested	Verified
TotalSupply	provides information about the total token supply	✓	✓	✓
BalanceOf	provides account balance of the owner's account	✓	✓	✓
Transfer	executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract

The image displays three panels, each representing a different smart contract. Each panel has a dark blue header with a dropdown arrow and the contract name. Below the header is a list of functions, each in an orange button. The panels are arranged side-by-side, with the third panel (DINOLANDNFTUPGRADE) being the tallest and containing the most functions.

Contract	Functions
DINOLAND	approve, burn, decreaseAllowance, increaseAllowance, mint, renounceOwnership, transfer, transferFrom, transferOwnership
TOKENTIMELOCK	init, release, split, transferBeneficiary
DINOLANDNFTUPGRADE	approve, createDino, evolveDino, initialize, pause, retireDino, safeTransferFrom, safeTransferFrom, setApprovalForAll, setCEO, setCFO, setCOO, setDNLStorageExten..., setDNLStorageURI, setSpawner, setSpawningManager, transferFrom, unpause, updateDino

Deployer cannot mint any new tokens

File	Name	Exist	Tested	Verified
Dinoland	Deployer cannot mint	✓	✓	✗
DinolandNFTUpgradeable	Deployer cannot mint	✓	✓	✓

Max / Total Supply: 1.000.000.000

Comments:

v1.0

- Dinoland
 - onlyOwner can only mint tokens as long as totalSupply() + amount is less than _maxTotalSupply
- DinolandNFTUpgradeable
 - While creating a Dino it has to mint new nft

Deployer cannot burn or lock user funds

File	Name	Exist	Tested	Verified
Dinoland	Deployer cannot lock	✓	✓	✗
DinolandNFTUpgradeable	Deployer cannot burn	✓	✓	✓

Comments:

v1.0

- Dinoland
 - Everybody can burn
- DinolandNFTUpgradeable
 - retireDino can only call whitelisted and onlySpawner

Deployer cannot pause the contract

File	Name	Exist	Tested	Verified
DinolandNFTUpgradeable	Deployer cannot pause	✓	✓	✗

Comments:

v1.0

- Following roles can pause (CLevel)
 - coo
 - Ceo
 - Coo

Overall checkup (Smart Contract Security)

nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

AUDIT PASSED

Critical issues

- no critical issues found -

High issues

- no high issues found -

Medium issues

Issue	File	Type	Line	Description
#1	GameManager	Weak PRNG	122, 123, 124	<p>There are services to generate random numbers in Smart contracts like Chainlink VRF (For further information read the doc: https://docs.chain.link/docs/chainlink-vrf/)</p> <p>Do not use <code>`block.timestamp`</code>, <code>`now`</code> or <code>`blockhash`</code> as a source of randomness</p>

Low issues

Issue	File	Type	Line	Description
#1	DinosAccessControl	A floating pragma is set	4	The current pragma Solidity directive is „ <code>^0.8.0</code> ”.
#2	DinoMarketplaceUpgradeable	Missing Zero Address Validation (missing-zero-check)	159, 184, 178, 90	Check that the address is not zero
#3	GameManager	Missing Zero Address Validation (missing-zero-check)	17, 18, 82, 78	Check that the address is not zero

#4	DinoMarketplaceUpgradeable	Contract locking ether	-	Remove the payable attribute or add a withdraw function
#5	TokenTimelock	Missing Events Arithmetic	120	Emit an event for critical parameter changes
#6	DinoMarketplaceUpgradeable	Missing Events Access Control	159	Emit an event for critical parameter changes
#7	DinoLandNFTUpgradeable	Missing Events Access Control	68-75	<p>DinoLandNFTUpgradeable.initialize() (DinoLandNFTUpgradeable.sol:68-75) should emit an event for:</p> <ul style="list-style-type: none"> • <code>ceoAddress = msg.sender (DinoLandNFTUpgradeable.sol#70)</code> • <code>spawningManager = msg.sender (DinoLandNFTUpgradeable.sol#71)</code> <p>Emit an event for critical parameter changes</p>
#8	DinoAccessControl	Missing Events Access Control	70, 78, 85, 90	Emit an event for critical parameter changes
#9	DinoLandNFTUpgradeable	State variable visibility is not set	56, 59, 61, 63	It is best practice to set the visibility of state variables explicitly
#10	GameManager	State variable visibility is not set	34, 35, 36, 37, 38, 40, 41, 42, 43, 44	It is best practice to set the visibility of state variables explicitly
#11	DinoMarketplaceUpgradeable	Unchecked tokens transfer	775, 781, 345, 351, 327, 421	Use `SafeERC20`, or ensure that the transfer/transferFrom return value is checked

Informational issues

- no informational issues found -

Commented Code exist

There are some instances of code being commented out in the following files that should be removed:

File	Line	Comment
DinoMarket placeUpgr deable	574	// require(candidateContract.implementsERC721());
	619	// _addAuction()

Recommendation

Remove the commented code, or address them properly.

The logo features the words "SolidProof" in a white, handwritten-style script. The "P" is large and stylized, with a long horizontal stroke that extends to the left. The background is a solid blue color with a faint, large shield emblem. The shield has a grid-like pattern on its right side and a solid blue area on its left side.
