Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Website

<https://beli.finance/>

Description

Beli Finance is a decentralized reserve policy-controlled currency protocol, Multi-Chain Yield Optimizer Aggregator platform that convert yield farm into \$BELI token and still earn small compound interest on their crypto holdings automatically. Each \$BELI token is backed by a basket of assets (e.g., USDT, BNB, BUSD Tokens etc etc) in the treasury, giving it an intrinsic value that it cannot fall below. Beli Finance also introduces economic and game-theoretic dynamics into the market through staking and compounding.

Project Engagement

During the 27th of January 2022, **Beli Finance Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

- ./helpers/ERC20.sol
- ./libraries/Address.sol
- ./libraries/SafeERC20.sol
- ./libraries/EnumerableSet.sol
- ./helpers/Ownable.sol
- ./helpers/ReentrancyGuard.sol
- ./interfaces/IVault.sol
- ./interfaces/ILocker.sol
- ./interfaces/IReferral.sol
- ./interfaces/IFeeReceiver.sol

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash
contracts/BeliFarm.sol	b3b1e5f2385b37da44df13c33eedc797e1f73d83
contracts/FeeReceiver.sol	c9baec4e23e22cd94d2905d23625647a9ca37864
contracts/Locker.sol	fb470be3b06abc1bb5e135b319e6f5724cdf252d
contracts/Referral.sol	3e83823eaccbe69f9b270c4c87e00cfa74aa258e

Source Lines v1.0

Risk Level v1.0

Capabilities

Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	4	0	0	1

Exposed Functions

This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.

Version	Public	Payable
1.0	45	0

Version	External	Internal	Private	Pure	View
1.0	23	35	2	0	20

State Variables

Version	Total	Public
1.0	43	40

Capabilities

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	0.6.12				

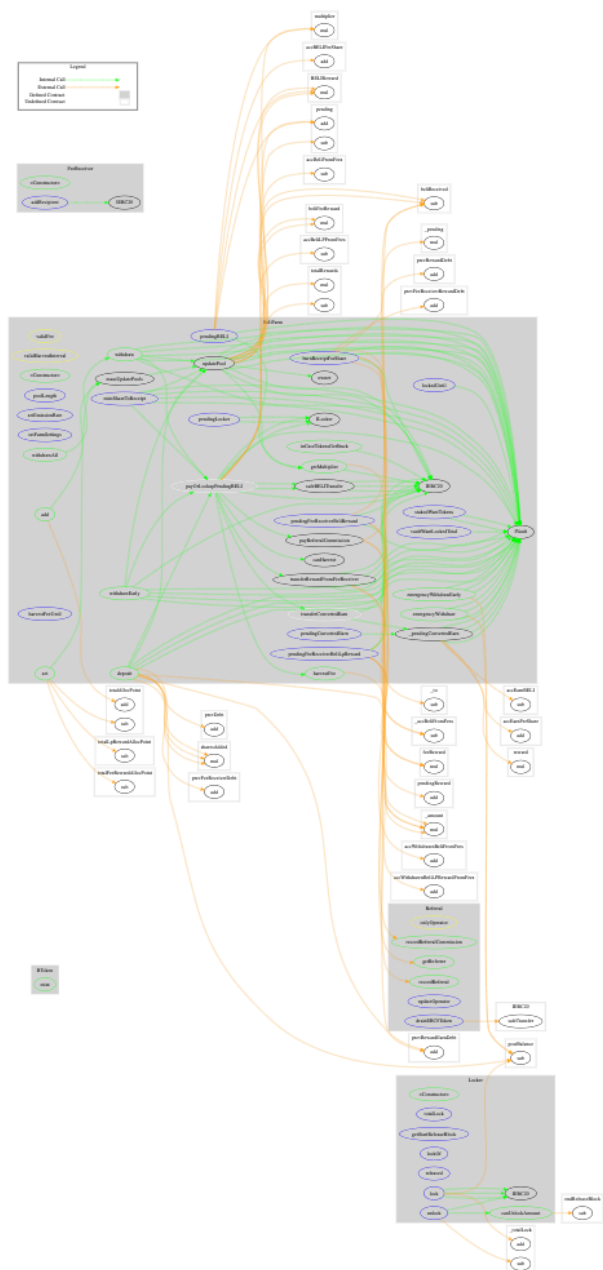

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	EC Recover	New/Create/Create2
1.0	yes					

Inheritance Graph v1.0

CallGraph

v1.0

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Cannot mint any new tokens
2. Cannot burn or lock user funds
3. Cannot pause the contract
4. Overall checkup (Smart Contract Security)

Write functions of contract v1.0

```
setEmissionRate  
setFarmSettings  
add  
set  
massUpdatePools  
updatePool  
deposit  
withdraw  
withdrawEarly  
withdrawAll  
emergencyWithdraw  
emergencyWithdrawEarly  
inCaseTokensGetStuck  
mintShareToReceipt  
burnReceiptForShare  
  
renounceOwnership  
transferOwnership
```

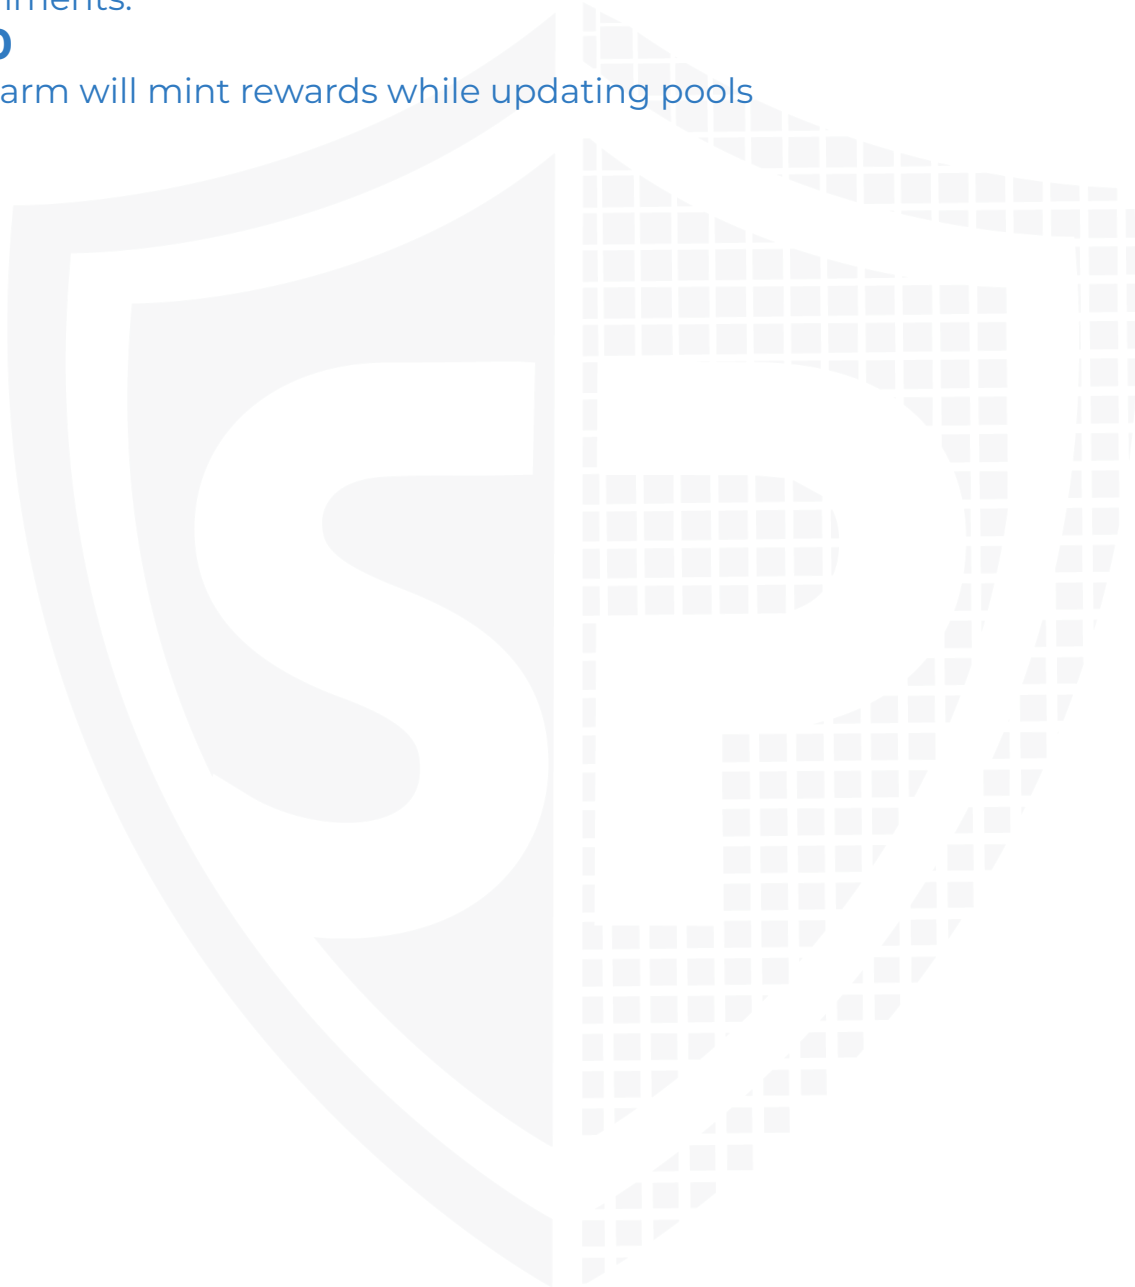

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
cannot mint	✓	✓	✗

Comments:

v1.0

- Farm will mint rewards while updating pools

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
cannot lock	✓	✓	✓
cannot burn	✓	✓	✗

Comments:

v1.0

- Everybody can burn receipt for shares with `burnReceiptForShare` function in `BeliFarm`

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

Legend

Attribute	Symbol

Modifiers and public functions

v1.0

BeliFarm

- setEmissionRate
 - onlyOwner
- setFarmSettings
 - onlyOwner
- add
 - onlyOwner
 - validFee
 - validHarvestInterval
- set
 - onlyOwner
 - validFee
 - validHarvestInterval
 - massUpdatePools
 - updatePool
- deposit
 - nonReentrant
- withdraw
 - nonReentrant
- withdrawEarly
 - nonReentrant
- withdrawAll
 - nonReentrant
- emergencyWithdraw
 - nonReentrant
- emergencyWithdrawEarly
 - nonReentrant
- inCaseTokensGetStuck
 - onlyOwner
- mintShareToReceipt
 - nonReentrant
- burnReceiptForShare
 - nonReentrant

FeeReceiver

- addRecipient
 - onlyOwner

Locker

- lock
- unlock

Referral

Comments

- Deployer can set following state variables without any limitations
 - `Poolinfo.harvestFeeInterval`
- Deployer can enable/disable following state variables
 - Either `Poolinfo.isLpReward` or `Poolinfo.isFeeReceiverReward`
 - operators
 - `totalReferralCommissions`
 - referrers

Please check if an `OnlyOwner` or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/BeliFarm.sol	2	————	993	907	725	104	619	
	contracts/FeeReceiver.sol	1	————	19	19	13	1	12	————
	contracts/Locker.sol	1	————	90	90	69	1	58	————
	contracts/Referral.sol	1	————	64	64	49	7	34	————
	Totals	5	————	1166	1080	856	113	723	

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

AUDIT PASSED

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

Issue	File	Type	Line	Description
#1	BeliFarm	Missing Zero Address Validation (missing-zero-check)	134	Check that the address is not zero
#2	FeeReceiver	Missing Zero Address Validation (missing-zero-check)	12	Check that the address is not zero

Informational issues

Issue	File	Type	Line	Description
#1	BeliFarm	Unused return values	807, 836	Ensure that all the return values of the function calls are used and handle both success and failure cases if needed by the business logic

Audit Comments

SW C-1 05	Unprotected Ether Withdrawal	CWE-284: Improper Access Control	PASSED
SW C-1 04	Unchecked Call Return Value	CWE-252: Unchecked Return Value	PASSED
SW C-1 03	Floating Pragma	CWE-664: Improper Control of a Resource Through its Lifetime	PASSED
SW C-1 02	Outdated Compiler Version	CWE-937: Using Components with Known Vulnerabilities	PASSED
SW C-1 01	Integer Overflow and Underflow	CWE-682: Incorrect Calculation	PASSED
SW C-1 00	Function Default Visibility	CWE-710: Improper Adherence to Coding Standards	PASSED

The logo features the words "SolidProof" in a white, handwritten-style script. The "P" is large and stylized, with a long horizontal stroke that extends to the left. The background is a solid blue color with a faint, large shield emblem. The shield has a grid-like pattern on its right side and a solid blue area on its left side.
