# Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Description

MASD is a multiplayer 3D game with blockchain technology. Be the first to create your base and play to earn a MASD token, buy or rent virtual plots of land, houses, items for survival in the game. Create your own clans and communities around the world in the game to participate in competitions for valuable items and MASD tokens together.

Being inspired by successful games like CS:GO and RUST, MASD-GAMES combines the best of both worlds and also allows players to earn money playing their favorite game and own limited resources purchased in the form of NFT

## Project Engagement

During the 14th January of 2022, **MASD Games Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Dependency / Import Path	Count
@openzeppelin/contracts/access/AccessControlEnumerable.sol	1
@openzeppelin/contracts/access/Ownable.sol	1
@openzeppelin/contracts/token/ERC20/IERC20.sol	1
@openzeppelin/contracts/token/ERC20/extensions/ERC20Burnable.sol	1
@openzeppelin/contracts/token/ERC20/extensions/ERC20Capped.sol	1
@openzeppelin/contracts/token/ERC20/extensions/draft-ERC20Permit.sol	1
@openzeppelin/contracts/token/ERC20/utils/SafeERC20.sol	1
@openzeppelin/contracts/utils/math/Math.sol	1
@openzeppelin/contracts/utils/math/SafeMath.sol	1

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

File Name	SHA-1 Hash
contracts/libraries/BP.sol	f2b9d1c7959393ffca55f0f17a6d3fd73957a304
contracts/libraries/PercentageVestingLibrary.sol	59e81e6a1a735153375eae65f5d6257ef71e0a6c
contracts/MASD.sol	cadc3214220c383f3bae82d77e463cca275a87d0

## Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. External approve function is restricted
6. Overall checkup (Smart Contract Security)

### Correct implementation of Token standard

Function	Description	Exist	Tested	Verified
TotalSupply	provides information about the total token supply	✓	✓	✓
BalanceOf	provides account balance of the owner's account	✓	✓	✓
Transfer	executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	returns a set number of tokens from a spender to the owner	✓	✓	✓

## Write functions of contract v1.0

▼ MASDVESTING	▼ MASD
createUserVesting	approve
createVestingParams	burn
renounceOwnership	burnFrom
transferOwnership	decreaseAllowance
withdraw	grantRole
withdrawAll	increaseAllowance
	mint
	permit
	renounceRole
	revokeRole
	transfer
	transferFrom

## Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	✓	✓	✗
Max / Total Supply	100.000.000 / can be set while deploying		

Comments:

### v1.0

- Only address with MINTER\_ROLE can mint new tokens as long as minting amount + total supply is lower equal max\_supply.

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✓
Deployer cannot burn	✓	✓	✗

Comments:

**v1.0**

- Everyone can burn their own tokens

## Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

Comments:

**v1.0**

- No pause function found in the contract.

## External approve function is restricted

Name	Exist	Tested	Status
External approve cannot be called without restriction	—	—	—

Comments:

### v1.0

- There are no external calls in the contract, so there is no external call without restriction.

## Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

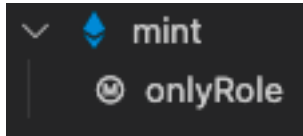

### Legend

MASDVesting

**Please check if an OnlyOwner or similar restrictive modifier has been forgotten.**

# Source Units in Scope

## v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/libraries/BP.sol	1	————	7	7	4	1	2	————
	contracts/libraries/PercentageVestingLibrary.sol	1	————	102	91	74	10	17	————
	contracts/MASD.sol	1	————	30	30	23	1	26	
	contracts/MASDVesting.sol	1	————	192	166	146	4	67	————
	<b>Totals</b>	<b>4</b>	————	<b>331</b>	<b>294</b>	<b>247</b>	<b>16</b>	<b>112</b>	

## Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

## AUDIT PASSED

### Critical issues

No critical issues

### High issues

No high issues

### Medium issues

No medium issues

### Low issues

Issue	File	Type	Line	Description
#1	BP	A floating pragma is set	2	The current pragma Solidity directive is „^0.8.4”.
#2	Percent ageVest ingLibra ry	A floating pragma is set	2	The current pragma Solidity directive is „^0.8.4”.
#3	MASD	A floating pragma is set	2	The current pragma Solidity directive is „^0.8.0”.

### Informational issues

Issue	File	Type	Line	Description
#1	Main	NatSpec documentation missing	-	If you start to comment your code, also comment all other functions, variables etc.

#2	Main	SafeMath library is not required	-	SafeMath is not required above pragma version 0.8.x. If you remove SafeMath, make sure to remove all
#3	Main	Unused variables	96, 99	Remove unused variables
#4	Percent ageVest ingLibra ry	Modifier ordering	47, 83,	Following visibility modifier should come before other modifiers  - Internal - Private
#5	MASDV esting	Misspelling	72, 81, 100, 104	Change - avaiable to available  Make sure to change it everywhere else also

## Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

### 19. January 2022:

The logo features the words "SolidProof" in a white, handwritten-style script. The "P" is particularly large and stylized, with a long horizontal stroke that extends to the left. The background is a solid blue color with a faint, large shield emblem. The shield has a blue-to-white gradient and a grid-like pattern on its right side.
