# Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## Project Description

Wasted Lands is truly Puzzle-RPG-Strategy mashup. Play and feel the irresistible attractiveness of the classic Match-3 board.

Immerse yourself in a world of adventure across the post-apocalyptic world with our PvE mode.

Gather your team of different kinds of species, from human to cyborgs and mutants and learn the true story of the biggest wipeout in history. As you progress through the game, secrets will be revealed.

Build your own shelter, collect equipments and resources to provide your community.

Be the strongest crew alive and claim your rewards in intense battles and tournaments.

## Project Engagement

During the 9th of December 2021, **WastedLands Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

| Level                | Value   | Vulnerability   | Risk (Required Action)  |
|----------------------|---------|---|---|
| <b>Critical</b>      | 9 - 10  | A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.      | Immediate action to reduce risk level.                              |
| <b>High</b>          | 7 – 8.9 | A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way. | Implementation of corrective actions as soon as possible.           |
| <b>Medium</b>        | 4 – 6.9 | A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.                                     | Implementation of corrective actions in a certain period.           |
| <b>Low</b>           | 2 – 3.9 | A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.       | Implementation of certain corrective actions or accepting the risk. |
| <b>Informational</b> | 0 – 1.9 | A vulnerability that have informational character but is not effecting any of the code.   | An observation that does not determine a level of risk              |

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

Context  
IERC20  
Ownable  
 SafeMath

# Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

## v1.0

| File Name                 | SHA-1 Hash                               |
|---------------------------|--|
| contracts/WastedLands.sol | e289f3b146e60a4a2f1e623ffed6919b4dea2cdc |

# Metrics

## Source Lines v1.0

## Risk Level v1.0

## Capabilities

### Components

| Version | Contracts | Libraries | Interfaces | Abstract |
|---------|-----------|-----------|------------|----------|
| 1.0     | 1         | 1         | 1          | 2        |

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

| Version | Public | Payable |
|---------|--------|---------|
| 1.0     | 31     | 0       |

| Version | External | Internal | Private | Pure | View |
|---------|----------|----------|---------|------|------|
| 1.0     | 16       | 44       | 4       | 13   | 12   |

### State Variables

| Version | Total | Public |
|---------|-------|--------|
| 1.0     | 16    | 8      |

### Capabilities

| Version | Solidity Versions observed | Experimental Features | Can Receive Funds | Uses Assembly | Has Destroyable Contracts |
|---------|----------------------------|-----------------------|-------------------|---------------|---------------------------|
| 1.0     | <code>^0.8.0</code>        |                       |                   |               |                           |

## Scope of Work

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

## Inheritance Graph v1.0

## Verify Claims

### Correct implementation of Token standard

| Tested | Verified |
|--------|----------|
| ✓      | ✓        |

| Function     | Description   | Exist | Tested | Verified |
|--------------|---|-------|--------|----------|
| TotalSupply  | provides information about the total token supply                           | ✓     | ✓      | ✓        |
| BalanceOf    | provides account balance of the owner's account                             | ✓     | ✓      | ✓        |
| Transfer     | executes transfers of a specified number of tokens to a specified address   | ✓     | ✓      | ✓        |
| TransferFrom | executes transfers of a specified number of tokens from a specified address | ✓     | ✓      | ✓        |
| Approve      | allow a spender to withdraw a set number of tokens from a specified account | ✓     | ✓      | ✓        |
| Allowance    | returns a set number of tokens from a spender to the owner                  | ✓     | ✓      | ✓        |

## Write functions of contract

addAddrException...

addAddrRouter

transferFrom

transferOwnership

## Deployer cannot mint any new tokens

| Name                 | Exist | Tested | Verified | File |
|----------------------|-------|--------|----------|------|
| Deployer cannot mint | —     | —      | —        | Main |

Max / Total Supply: 100.000.000

## Deployer cannot burn or lock user funds

| Name                 | Exist | Tested | Verified |
|----------------------|-------|--------|----------|
| Deployer cannot lock | ✓     | ✓      | ✗        |
| Deployer cannot burn | ✓     | ✓      | ✗        |

### v1.0

#### Comments

- Deployer can set following state variables without any limitations
  - maxAmountPerTx
  - blacklist addresses
- Deployer can lock user funds by pausing

## Deployer cannot pause the contract

| Name                  | Exist | Tested | Verified |
|-----------------------|-------|--------|----------|
| Deployer cannot pause | ✓     | ✓      | ✗        |

### v1.0

#### Comments

- Deployer can pause

## Overall checkup (Smart Contract Security)

| Tested | Verified |
|--------|----------|
| ✓      | ✓        |

### Legend

| Attribute                | Symbol |
|--------------------------|--------|
| Verified / Checked       | ✓      |
| Partly Verified          | ⚠      |
| Unverified / Not checked | ✗      |
| Not available            | —      |

## OnlyOwner functions

```
burnToken  
burnSwapFund  
setMaxAmountPerTx  
setPaused  
addToBlacklist  
removeFromBlacklist  
addAddrExceptionAddr  
removeAddrExceptionAddr  
addAddrRouter  
removeAddrRouter  
setSwapfee
```

- Deployer can set following state variables without any limitations
  - maxAmountPerTx
  - swapFee
- Deployer can
  - pause
  - Blacklist addresses
  - Add exception address
  - Add router addresses
- burnSwapFund
  - Burned from contract address
- burnToken
  - Burned from burn address

# CallGraph

# Source Units in Scope

## v1.0

| Type  | File                      | Logic Contracts | Interfaces | Lines | nLines | nSLOC | Comment Lines | Complex. Score | Capabilities  |
|---|---------------------------|-----------------|------------|-------|--------|-------|---------------|----------------|---|
|  | contracts/WastedLands.sol | 4               | 1          | 583   | 532    | 277   | 227           | 195            |  |
|  | Totals                    | 4               | 1          | 583   | 532    | 277   | 227           | 195            |  |

### Legend

| Attribute        | Description   |
|------------------|---|
| Lines            | total lines of the source unit  |
| nLines           | normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)   |
| nSLOC            | normalized source lines of code (only source-code lines; no comments, no blank lines)   |
| Comment Lines    | lines containing single or block comments   |
| Complexity Score | a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...) |

# Audit Results

## AUDIT PASSED

### Critical issues

- no critical issues found -

### High issues

- no high issues found -

### Medium issues

- no medium issues found -

### Low issues

| Issue | File | Type  | Line | Description  |
|-------|------|---|------|--|
| #1    | Main | Contract doesn't import npm packages from source (like OpenZeppelin etc.) | -    | We recommend to import all packages from npm directly without flatten the contract. Functions could be modified or can be susceptible to vulnerabilities |
| #2    | Main | A floating pragma is set  | 3    | The current pragma Solidity directive is „^0.8.0“.   |

### Informational issues

| Issue | File | Type                        | Line                                       | Description             |
|-------|------|-----------------------------|--|-------------------------|
| #1    | Main | Functions that are not used | 19, 341, 301, 363, 172, 214, 226, 197, 185 | Remove unused functions |

### Audit Comments

#### 11. December 2021:

- Deployer can lock user funds by pausing or blacklisting addresses
- Read whole report for more information

## SWC Attacks

The logo features the words "Solid Roofed" in a white, elegant script font. The letters are interconnected, with the 'S' and 'R' being particularly large and stylized. The text is set against a dark blue background. Behind the text, there is a faint, larger-scale grid pattern and a shield-like shape composed of smaller squares, creating a textured, architectural feel.
