# Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Unicrypt, Uniswap, PancakeSwap etc’...)

**SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.**

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

## **Telegram**

[https://t.me/Predator\\_Main](https://t.me/Predator_Main)

## **Twitter**

<https://twitter.com/PredatorToken>

## Description

Predator Token **\$PED** is a decentralized community driven token that aims to bring a fair crypto ecosystem for its community (Pack). Members earn interest through hodling tokens in their wallet which will be automatically send to their wallets. Everyone can decide which Prey (e.g. BTC, BNB, etc) should be hunted next. During the hunt new Predators will come and old will leave. They will contribute a part of their Prey to the Prey Pot so the wealth of the Pack stays maintained. Predators won't stop hunting, as soon as the hunt is over, a new Prey is sought and hunted.

## Project Engagement

During the 1st of December 2021, **Predator Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

# Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
<b>Critical</b>	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
<b>High</b>	7 - 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
<b>Medium</b>	4 - 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
<b>Low</b>	2 - 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
<b>Informational</b>	0 - 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

# Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

## **Methodology**

The auditing process follows a routine series of steps:

1. Code review that includes the following:
  - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
  - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
  - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
  - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
  - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

## Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

```
SafeMath
SafeMathUint
SafeMathInt
IERC20
IERC20Metadata
Context
Ownable
IERC20EXT
ERC20
DividendPayingTokenInterface
DividendPayingTokenOptionalInterface
DividendPayingToken
IterableMapping
IUniswapV2Pair
IUniswapV2Factory
IUniswapV2Router01
IUniswapV2Router02
```

## Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

*A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.*

### v1.0

File Name	SHA-1 Hash
contracts/predator.sol	91bce8cebda90edfbce3a97c0c636165569b45e0

### v1.1

File Name	SHA-1 Hash
contracts/predator.sol	62d15604799a9ee8d58a06736e8778119f70b395

# Metrics

## Source Lines v1.0

## Risk Level v1.0

## Capabilities

### Components

Version	Contracts	Libraries	Interfaces	Abstract
1.0	5	4	9	1

### Exposed Functions

*This section lists functions that are explicitly declared public or payable. Please note that getter methods for public stateVars are not included.*

Version	Public	Payable
1.0	151	7

Version	External	Internal	Private	Pure	View
1.0	104	121	6	25	64

### State Variables

Version	Total	Public
1.0	39	21

### Capabilities

Version	Solidity Versions observed	Experimental Features	Can Receive Funds	Uses Assembly	Has Destroyable Contracts
1.0	<code>^0.6.2</code>		yes	**** (0 asm blocks)	

Version	Transfers ETH	Low-Level Calls	DelegateCall	Uses Hash Functions	ECRecover	New/Create/Create2
---------	---------------	-----------------	--------------	---------------------	-----------	--------------------

1.0	yes					yes → New Contr act:P redat orDiv idend Track er
-----	-----	--	--	--	--	--

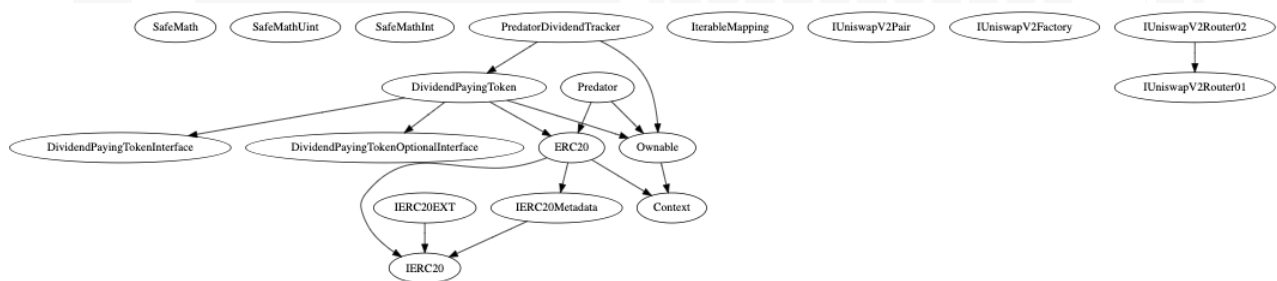

## Scope of Work

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. Overall checkup (Smart Contract Security)

# Inheritance Graph v1.0

## Verify Claims

### Correct implementation of Token standard

Tested	Verified
✓	✓

Function	Description	Exist	Tested	Verified
TotalSupply	provides information about the total token supply	✓	✓	✓
BalanceOf	provides account balance of the owner's account	✓	✓	✓
Transfer	executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	returns a set number of tokens from a spender to the owner	✓	✓	✓

## Write functions of contract

1. approve

2. blacklistAddress

3. claim

4. decreaseAllowance

5. excludeFromDividends

6. excludeFromFees

7. excludeMultipleAccountsFromFees

8. immediateUpdateReflectionAddress

9. increaseAllowance

10. processDividendTracker

11. renounceOwnership

12. setAutomatedMarketMakerPair

13. setBuyTax

14. setMinimumTokenBalanceForDividends

15. setPreyPotLimit

16. setSellTax

17. setTokenAmountBeforeSwap

18. transfer

19. transferFrom

20. transferOwnership

21. updateClaimWait

22. updateDividendTracker

23. updateGasForProcessing

24. updateReflectionAddress

25. updateUniswapV2Router

## Deployer cannot mint any new tokens

Name	Exist	Tested	Verified
Deployer cannot mint	✓	✓	✓

Max / Total Supply: 100.000.000

## Deployer cannot burn or lock user funds

Name	Exist	Tested	Verified
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	✓	✓	✓

Comments:

**v1.0**

- Deployer can lock user funds by blacklisting addresses

## Deployer cannot pause the contract

Name	Exist	Tested	Verified
Deployer cannot pause	—	—	—

## Overall checkup (Smart Contract Security)

Tested	Verified
✓	✓

### Legend

Attribute	Symbol
Verified / Checked	✓
Partly Verified	⚠
Unverified / Not checked	✗
Not available	—

## Modifiers

### Predator

```
setTokenAmountBeforeSwap  
updateReflectionAddress  
immediateUpdateReflectionAddress  
updateDividendTracker  
setMinimumTokenBalanceForDividends  
updateUniswapV2Router  
excludeFromFees  
excludeMultipleAccountsFromFees  
setAutomatedMarketMakerPair  
blacklistAddress  
updateGasForProcessing  
updateClaimWait  
excludeFromDividends  
processDividendTracker
```

```
setPreyPotLimit  
setBuyTax  
setSellTax
```

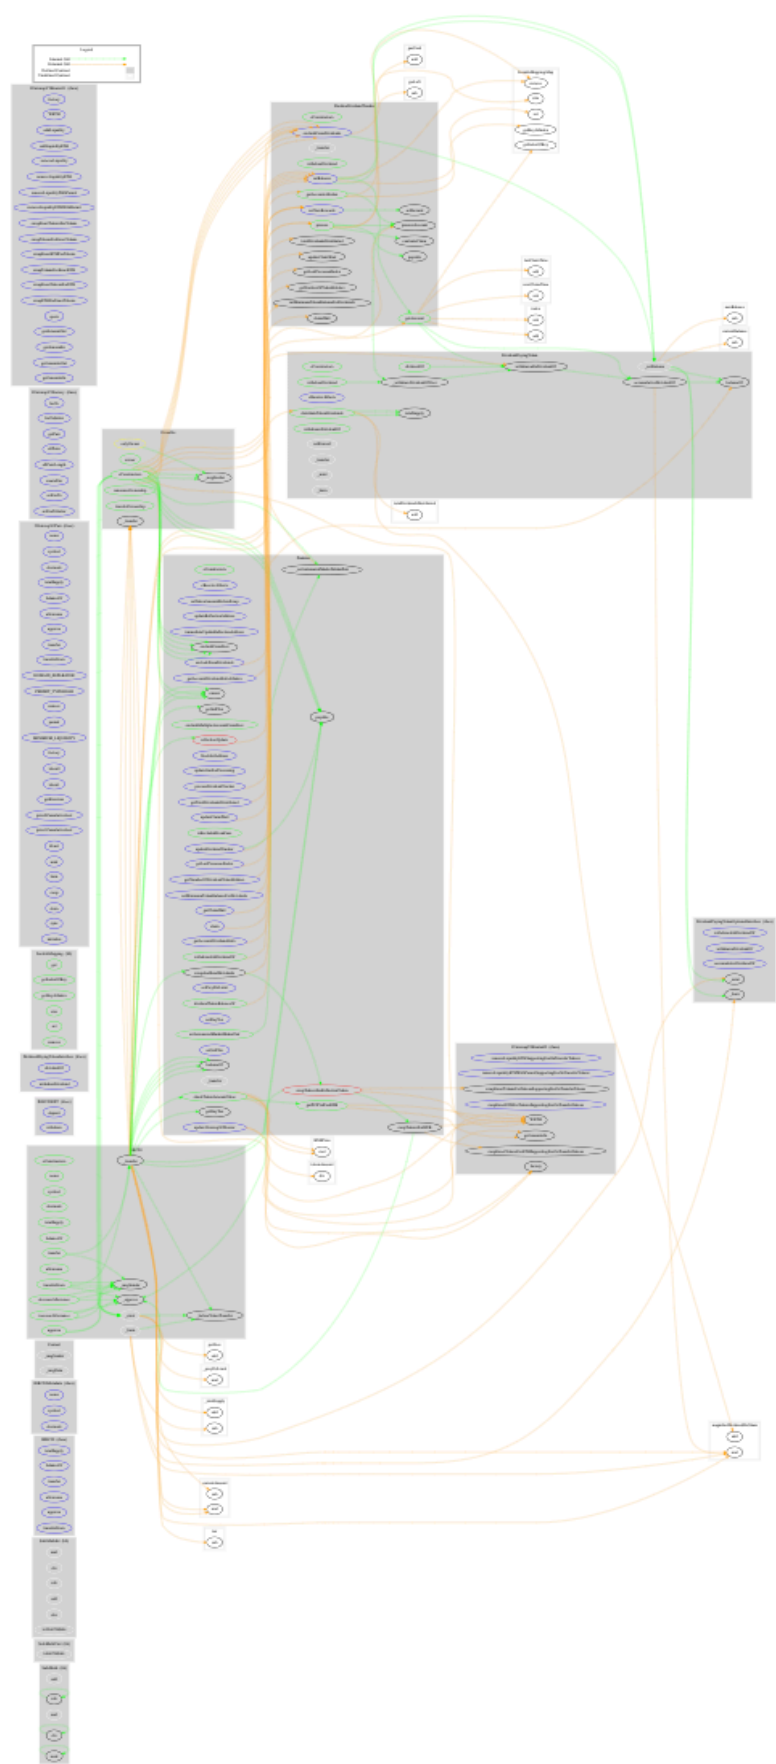

### PredatorDividendTracker

```
setMinimumTokenBalanceForDividends  
  
setNewRewards  
excludeFromDividends  
updateClaimWait  
setBalance  
  
processAccount
```

## Comments

- Following state variables can be set without any limitations
  - tokenAmountBeforeSwap
  - minimumTokenBalanceForDividends
  - \_preyPotLimit
  - minimumTokenBalanceForDividends

# CallGraph

## Source Units in Scope v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/predator.sol	10	9	2067	1654	839	661	869	
	Totals	10	9	2067	1654	839	661	869	

## v1.1

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/predator.sol	10	9	1921	1534	799	604	859	
	Totals	10	9	1921	1534	799	604	859	

## Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

# Audit Results

## AUDIT PASSED

### Critical issues

- no critical issues found -

### High issues

- no high issues found -

### Medium issues

Issue	File	Type	Line	Description
#1	Main	Reentrancy vulnerabilities	1913	Apply the [ `check-effects-interactions pattern` ]( <a href="http://solidity.readthedocs.io/en/v0.4.21/security-considerations.html#re-entrancy">http://solidity.readthedocs.io/en/v0.4.21/security-considerations.html#re-entrancy</a> ).or nonReentrant modifier from OpenZeppelin

### Low issues

Issue	File	Type	Line	Description
#1	Main	Contract doesn't import npm packages from source (like OpenZeppelin etc.)	-	We recommend to import all packages from npm directly without flatten the contract. Functions could be modified or can be susceptible to vulnerabilities

### Informational issues

Issue	File	Type	Line	Description
#1	Main	Unused return values	1897	Ensure that all the return values of the function calls are used and handle both success and failure cases if needed by the business logic

#2	Main	Unused state variables	161	Remove unused state variables
#3	Main	Unnecessary code after require statement	972-974	Code will never be called
#4	Main	Misspelling error	182	"Value less than 0"  Instead of "Value ess than 0"

## Audit Comments

### 08. December 2021:

- [Deployer can lock user funds](#)
- [Read whole report for further information](#)

The logo features the words "SolidProof" in a white, handwritten-style script. The "P" is large and stylized, with a long horizontal stroke that extends to the left. The background is a solid blue color with a faint, large shield emblem. The shield has a grid-like pattern on its right side and a solid blue area on its left side.
