Disclaimer

SolidProof.io reports are not, nor should be considered, an “endorsement” or “disapproval” of any particular project or team. These reports are not, nor should be considered, an indication of the economics or value of any “product” or “asset” created by any team. SolidProof.io do not cover testing or auditing the integration with external contract or services (such as Uniswap, Uniswap, PancakeSwap etc’...)

SolidProof.io Audits do not provide any warranty or guarantee regarding the absolute bug- free nature of the technology analyzed, nor do they provide any indication of the technology proprietors. SolidProof Audits should not be used in any way to make decisions around investment or involvement with any particular project. These reports in no way provide investment advice, nor should be leveraged as investment advice of any sort.

SolidProof.io Reports represent an extensive auditing process intending to help our customers increase the quality of their code while reducing the high level of risk presented by cryptographic tokens and blockchain technology. Blockchain technology and cryptographic assets present a high level of ongoing risk. SolidProof’s position is that each company and individual are responsible for their own due diligence and continuous security. SolidProof in no way claims any guarantee of security or functionality of the technology we agree to analyze.

Description

Metaverse VR (MEVR) token is main token of project which will help you to get early access to projects such as presales to buy NFT's and get early access to developed projects in the ecosystem.

Project Engagement

During the 15th of January 2022, **Metaverse VR Team** engaged Solidproof.io to audit smart contracts that they created. The engagement was technical in nature and focused on identifying security flaws in the design and implementation of the contracts. They provided Solidproof.io with access to their code repository and whitepaper.

v1.0

- <https://bscscan.com/address/0xdde3ed0bb77c1cafabf8b38f9a1e81edddc7ddc9#code>

Vulnerability & Risk Level

Risk represents the probability that a certain source-threat will exploit vulnerability, and the impact of that event on the organization or system. Risk Level is computed based on CVSS version 3.0.

Level	Value	Vulnerability	Risk (Required Action)
Critical	9 - 10	A vulnerability that can disrupt the contract functioning in a number of scenarios, or creates a risk that the contract may be broken.	Immediate action to reduce risk level.
High	7 – 8.9	A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way.	Implementation of corrective actions as soon as possible.
Medium	4 – 6.9	A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.	Implementation of corrective actions in a certain period.
Low	2 – 3.9	A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.	Implementation of certain corrective actions or accepting the risk.
Informational	0 – 1.9	A vulnerability that have informational character but is not effecting any of the code.	An observation that does not determine a level of risk

Auditing Strategy and Techniques Applied

Throughout the review process, care was taken to evaluate the repository for security-related issues, code quality, and adherence to specification and best practices. To do so, reviewed line-by-line by our team of expert pentesters and smart contract developers, documenting any issues as there were discovered.

Methodology

The auditing process follows a routine series of steps:

1. Code review that includes the following:
 - i) Review of the specifications, sources, and instructions provided to SolidProof to make sure we understand the size, scope, and functionality of the smart contract.
 - ii) Manual review of code, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
 - iii) Comparison to specification, which is the process of checking whether the code does what the specifications, sources, and instructions provided to SolidProof describe.
2. Testing and automated analysis that includes the following:
 - i) Test coverage analysis, which is the process of determining whether the test cases are actually covering the code and how much code is exercised when we run those test cases.
 - ii) Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts.

Used Code from other Frameworks/Smart Contracts (direct imports)

Imported packages:

- SafeMath
- IBEP20
- Auth
- IDEXFactory
- IDEXRouter
- IDividendDistributor
- DividendDistributor

Tested Contract Files

This audit covered the following files listed below with a SHA-1 Hash.

A file with a different Hash has been modified, intentionally or otherwise, after the security review. A different Hash could be (but not necessarily) an indication of a changed condition or potential vulnerability that was not within the scope of this review.

v1.0

File Name	SHA-1 Hash

Scope of Work/Verify Claims

The above token Team provided us with the files that needs to be tested (Github, Bscscan, Etherscan, files, etc.). The scope of the audit is the main contract (usual the same name as team appended with .sol).

We will verify the following claims:

1. Correct implementation of Token standard
2. Deployer cannot mint any new tokens
3. Deployer cannot burn or lock user funds
4. Deployer cannot pause the contract
5. External approve function is restricted
6. Overall checkpoint (Smart Contract Security)

Correct implementation of Token standard

Function	Description	Exist	Tested	Verified
TotalSupply	provides information about the total token supply	✓	✓	✓
BalanceOf	provides account balance of the owner's account	✓	✓	✓
Transfer	executes transfers of a specified number of tokens to a specified address	✓	✓	✓
TransferFrom	executes transfers of a specified number of tokens from a specified address	✓	✓	✓
Approve	allow a spender to withdraw a set number of tokens from a specified account	✓	✓	✓
Allowance	returns a set number of tokens from a spender to the owner	✓	✓	✓

Write functions of contract v1.0

1. approve	
2. approveMax	
3. authorize	
4. clearStuckBalance	
5. clearStuckBalance_sender	
6. cooldownEnabled	
7. enable_blacklist	
8. manage_blacklist	
9. multiTransfer	
10. multiTransfer_fixed	
11. setDistributionCriteria	
12. setDistributorSettings	
13. setFeeReceivers	
14. setFees	
15. setIsDividendExempt	
16. setIsFeeExempt	
17. setIsTimelockExempt	
18. setIsTxLimitExempt	
19. setMaxTxPercent_base1000	
20. setMaxWalletPercent_base1000	
21. setSwapBackSettings	
22. setTargetLiquidity	
23. setTxLimit	
24. set_sell_multiplier	
25. tradingStatus	
26. transfer	
	27. transferFrom
	28. transferOwnership
	29. unauthorize

Deployer cannot mint any new tokens

Name	Exist	Tested	Status
Deployer cannot mint	—	—	—
Max / Total Supply	100.000.000		

Deployer cannot burn or lock user funds

Name	Exist	Tested	Status
Deployer cannot lock	✓	✓	✗
Deployer cannot burn	✓	✓	✓

Comments:

v1.0

- It will burn tokens while taking fee in takeFee function
- Deployer can lock user funds by
 - Setting tradingOpen to false
 - Setting blacklistMode to false
 - Setting address as blacklist
 - Setting _maxWalletToken to 0
 - Setting buyCooldownEnabled to true and set cooldownTimerInterval to a high value
 - Setting _maxTxAmount to 0

Deployer cannot pause the contract

Name	Exist	Tested	Status
Deployer cannot pause	—	—	—

External approve function is restricted

Name	Exist	Tested	Status
External approve cannot be called without restriction	—	—	—

Overall checkup (Smart Contract Security)

Comments

- Deployer can set following state variables without any limitations
 - `_maxWalletToken`
 - `_maxTxAmount`
 - Can be set as percentage or as amount
 - `sellMultiplier`
 - `cooldownTimerInterval`
 - `liquidityFee`
 - `reflectionFee`
 - `marketingFee`
 - `ecosystemfee`
 - `burnFee`
 - `totalFee`
 - `feeDenominator`
 - `swapThreshold`
 - `targetLiquidityDenominator`
 - `minPeriod`
 - `minDistribution`
- Deployer can enable/disable following state variables
 - `tradingOpen`
 - `buyCooldownEnabled`
 - `isDividendExempt`
 - `blacklistMode`
 - `isBlacklisted`
 - `isTxLimitExempt`
 - `isTimelockExempt`
 - `swapEnabled`
 - `targetLiquidity`
- Authorized addresses can
 - Transfer address balance to `marketingFeeReceiver`
 - Transfer address balance to him-/herself

Please check if an `OnlyOwner` or similar restrictive modifier has been forgotten.

Source Units in Scope

v1.0

Type	File	Logic Contracts	Interfaces	Lines	nLines	nSLOC	Comment Lines	Complex. Score	Capabilities
	contracts/metaversevr.sol	4	4	772	702	515	24	541	
	Totals	4	4	772	702	515	24	541	

Legend

Attribute	Description
Lines	total lines of the source unit
nLines	normalized lines of the source unit (e.g. normalizes functions spanning multiple lines)
nSLOC	normalized source lines of code (only source-code lines; no comments, no blank lines)
Comment Lines	lines containing single or block comments
Complexity Score	a custom complexity score derived from code statements that are known to introduce code complexity (branches, loops, calls, external interfaces, ...)

Audit Results

AUDIT PASSED

Critical issues

No critical issues

High issues

No high issues

Medium issues

No medium issues

Low issues

Issue	File	Type	Line	Description
#1	Main	Contract doesn't import npm packages from source (like OpenZeppelin etc.)	-	We recommend to import all packages from npm directly without flatten the contract. Functions could be modified or can be susceptible to vulnerabilities
#2	Main	A floating pragma is set	17	The current pragma Solidity directive is „^0.7.4“.
#3	Main	Missing Zero Address Validation (missing-zero-check)	105, 681, 682, 683, 684	Check that the address is not zero

#4	Main	State variable visibility is not set	175, 183, 184, 185, 187, 188, 189, 202, 204, 341, 342, 343, 349, 354, 355, 360, 361, 362, 363, 380, 381, 389, 397,	It is best practice to set the visibility of state variables explicitly
#5	Main	Missing Events Arithmetic	222, 669, 462, 466, 687, 692, 572	Emit an event for critical parameter changes
#6	Main	Overflow possible	729	Use SafeMath library math operations instead of raw math to avoid overflows
#7	Main	transferOwnership authorization	104-108	Remove authorization from oldOwner after transferring ownership

Informational issues

Issue	File	Type	Line	Description
#1	Main	State variables that could be declared constant (constable-states)	184, 197, 342, 341, 343, 349	Add the `constant` attributes to state variables that never change
#2	Main	Unused return values	598	Ensure that all the return values of the function calls are used and handle both success and failure cases if needed by the business logic
#3	Main	Describing comments missing	-	If you start to comment your code, also comment all other functions, variables etc.
#4	Main	Require message is missing	748, 722, 212 702, 637, 206	Provide an error message to require statement
#5	Main	License misspelling	15	Change Licence to License

#6	Main	Naming convention	420	<p>Use mixedCase convention for changeable variables, functions</p> <ul style="list-style-type: none"> - ecosystemfeeReceiver to ecosystemFeeReceiver line: 420 - _ecosystemfeeReceiver to _ecosystemFeeReceiver line: 680, 683 - supress to suppress line: 619 - set_sell_multiplier to setSellMultiplier line: 572 - Multiplier to multiplier line: 572, 573 - enable_blacklist to enableBlacklist line: 646 - manage_blacklist to manageBlacklist line: 650 - _ecosystemfee to _ecosystemFee line: 669, 673, 675 <p>Make sure to change variable everywhere in the contract if you convert the variable name in mixedCase naming convention</p>
----	------	-------------------	-----	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Audit Comments

We recommend you to use the special form of comments (NatSpec Format, Follow link for more information <https://docs.soliditylang.org/en/v0.5.10/natspec-format.html>) for your contracts to provide rich documentation for functions, return variables and more. This helps investors to make clear what that variables, functions etc. do.

19. January 2022:

- Read whole report for more information
- The Low Issues #6 and #7 were acknowledged and initial wallet was unauthorized via function.

The logo features the words "SolidProof" in a white, handwritten-style script. The "P" is particularly large and stylized, with a long horizontal stroke that extends to the left. The background is a solid blue color with a faint, large shield emblem. The shield has a grid-like pattern on its right side and a solid blue area on its left side.
